## CONCEPTUAL AND THEORETICAL APPROACHES TO TOURISM

**Mir-Djafarova Aziza Zhavokhirovna**

Samarkand Institute of Economics and Service. Assistant of the Department of Tourism.

**Abstract:** In this report, special attention is paid to the fact that tourism is an important sector that brings billions of income to the world economy. The previous research works are mainly related to the tourism of the past, and suggestions and recommendations are given that the main attention should be paid to modern tourism.

**Keywords:** individuals, nations, spots, economy, opportunities coming, tourism industry.

**United Nations World Tourism Organization (UNWTO)** defines tourism as a travel industry as a social, cultural, financial marvel that involves the development of individuals to nations or spots outside their typical climate for individual or business, proficient purposes. These individuals are called guests (which might be either travelers or adventurers; inhabitants or non-occupants), the travel industry has to do with their activities.[1]

United Nations World Tourism Organization (1995) says tourists can be domestic, inbound, or outbound. Home travelers are residents of the country who travel within the country, inbound vacationers are ones who are visiting a given country, outbound travelers are ones who are going into the country to go to other countries.

Detailed components of tourism, which are given in Table 1 show services and goods. Theme parks, transportation, restaurants, motels, inns, museums, have their industrial arrangement codes in each advanced country. Even though a general alliance of connected actions, businesses originate together to make an extra

<http://academicjournalonline.org/index.php/ijtmm>

complete idea, tourism enterprise does not have its wonderful business enterprise code. To address this hassle corporations inclusive of UNWTO have led endeavors to acknowledge expansiveness, the financial effect of the travel industry. Despite fact that the travel industry won't be sorted as an endeavor, it is huge to the economy of a country.

To defeat a portion of issues met in the unfurling travel industry, a model introduced in Figure 1 was set up to high-point significant givers, powers that structure the travel industry. the model gives an image that begins to catch the dynamic, interconnected nature of travel industry exercises. This model will support the development of halal tourism in Uzbekistan and will further enhance the opportunities coming from the tourism industry.

At first travel for leisure was inclusive to the elite, only a selected few were traveling. As history shows traveling was available to only a higher class of people, royalty, it can be observed from the Roman empire's time to the 17<sup>th</sup> century. During period young aristocrats were encouraged to travel through Europe, learn about foreign culture.[2]

<http://academicjournalonline.org/index.php/ijtmm>

"Hospitality" precedes "travel industry", it is first referenced in the 14th century, it comes from Latin "hospes", which implies words, for example, "have", "outsider", "visitor". "Tourist" was referenced in 1772. [3] William Donald clarifies that "visit" begins from Greek, Latin words for "circle, turn", which implies exercises of vacationers which is circumventing spots, returning home.[4]

Tourism is very ancient, is the source of income in many countries. Also, the industry has changed a lot since it became mainstream. Furthermore, it will be changed again due to pandemic since there is a need for new procedures, more travel restrictions. Although the basics of tourism remain the same, the number of tourists has increased dramatically over the decade, tourism infrastructure, touristic attractions have also grown in numbers. There are also new types of tourism such as medical tourism, halal tourism, more. However, there is still a need for systematically analyzing the origin, history of tourism. As Walton mentioned [5], tourism studies focus on the present situation rather than the past, so there is a lack of historical analysis in tourism studies.

Thinking back to starting points, early examples of the travel industry isn't a period of slumbering exercise. The on-off chance that one is to genuinely comprehend present, not to mention estimate practically about the future idea of the travel industry, at that point unquestionably it carries on one to in any event acknowledge, if not comprehend, where travel industry has come from. It is all things considered, in numerous western nations, an expanding number of eastern, antipodean nations, a significant social, monetary, ecological, social power. Regardless of whether one accepts precision of measurements set forth by that worldwide travel industry advocates UNWTO or not, there are huge quantities of individuals voyaging globally for the travel industry, a few times that number occupied with homegrown travel industry who highlight even less plainly in factual overviews. To envision or recommend that these enormous transitory movements are

<http://academicjournalonline.org/index.php/ijtmm>

a result of the last 50 years is innocent, debilitate analysts, especially those new to the travel industry field, from finding out about, from the past.

Most researchers focused on travel defined by UNWTO (2014) [6]:

Travel alludes to movement of voyagers while travel industry alludes to the action of guests: A guest is an explorer going on an outing to fundamental objective external his/her typical climate, for not a year, for any essential explanation (business, diversion, or another individual explanation) or then to be used by an occupant component in-country or spots visited.

After analyzing research articles posted inside best travel industry journals it was discovered that the fundamental point of examination became the travel industry as a relaxation movement. These movements, exercises occupied with by both early, current people on their movements are significant in themselves, in assisting with understanding starting points of the present-day travel industry. We have numerous innovative guides to help our amusement of recreation time today however genuine exercises in which we have cooperated have not changed incredibly in structure or rationale over the long haul. One of the chapters of Armitage's book (1997) is entitled "Travelling and Marveling" [7], a word which summarizes the conduct of a large number regardless of the time it is going by saying that principle motivation behind their visit is expanding, meandering around. This conduct remains similar where we are visiting Eiffel Tower, pyramids of Egypt, chronicled urban communities of Samarkand, Bukhara, furthermore, every traveler will bring souvenirs from spots they visit as confirmation that y have visited well-known attractions.

The travel industry is being treated as a new marvel on the planet, so travel industry research has additionally endured, it doesn't think about a set of experiences, furthermore for its cutting-edge importance. Set up travel industry scholars have since quite a while ago wound up familiar with having their examinations managed as

<http://academicjournalonline.org/index.php/ijtmm>

light-weight, insignificant, most essentially of all, out of the zone, particularly in appraisals of exploration quality [8]. One reason for the travel industry concentrates done being as broadly regarded or normal since it must be is on grounds that the travel industry is certifiably not a subject[9]. Be that as it may, as an option a subject especially proper for the instructional assessment using specialists from various controls, including humanities, business endeavor (executives), financial matters, geology, political investigations, humanism.

This is maybe why in his review of most expressed travel industry creators from 1970 to 2007 McKercher (2008) noticed nine of main 25 to have advanced educations in Geography, proposing that their examinations compositions may be of more extensive pastime in the travel industry than to geographers alone<sup>[10]</sup>.

One thing that is recognizable from new exploration done in the travel industry is getting of models, thoughts from different fields, an examination has become multidisciplinary research.
